### **NAME**

mtx-context - ConTeXt Process Management

### **SYNOPSIS**

mtxrun --script context [ OPTIONS ... ] [ FILENAMES ]

### DESCRIPTION

**ConTeXt Process Management** 

### **OPTIONS: BASIC**

- **--run** process (one or more) files (default action)
- --make create context formats

#### --ctx=name

use ctx file (process management specification)

**--noctx** ignore ctx directives and flags

#### --interface

use specified user interface (default: en)

### --autopdf

close pdf file in viewer and start pdf viewer afterwards

## --purge

purge files either or not after a run (--pattern=...)

### --purgeall

purge all files either or not after a run (--pattern=...)

## --usemodule=list

load the given module or style, normally part of the distribution

### --environment=list

load the given environment file first (document styles)

## --mode=list

enable given the modes (conditional processing in styles)

# --path=list

also consult the given paths when files are looked for

## --arguments=list

set variables that can be consulted during a run (key/value pairs)

## --randomseed=number

set the randomseed

#### --result=name

rename the resulting output to the given name

## --trackers=list

set tracker variables (show list with --showtrackers)

### --directives=list

set directive variables (show list with --showdirectives)

#### --silent=list

disable logcatgories (show list with --showlogcategories)

**--strip** strip Lua code (only meant for production where no errors are expected)

#### --errors=list

show errors at the end of a run, quit when in list (also when --silent)

## --htmlerrorpage

generate html error page instead (optional: =scite)

### --noconsole

disable logging to the console (logfile only)

### --nodummy

don't create a dummy file (can confuse pdf viewers that keep file in view)

# --purgeresult

purge result file before run

### --forcexml

force xml stub

#### --forcecld

force cld (context lua document) stub

### --forcelua

force lua stub (like texlua)

### --forcemp

force mp stub

### --arrange

run extra imposition pass, given that the style sets up imposition

### --noarrange

ignore imposition specifications in the style

- **--pages** report pagenumbers of names pages and list references (--page=...)
- --jit use luajittex with jit turned off (only use the faster virtual machine)
- --jiton use luajittex with jit turned on (in most cases not faster, even slower)
- **--once** only run once (no multipass data file is produced)
- **--runs** process at most this many times

# --forcedruns

process this many times (permits for optimization trial runs)

## --batchmode

run without stopping and do not show messages on the console

### --nonstopmode

run without stopping

### --nosynctex

never initializes synctex (for production runs)

#### --synctex

run with synctex enabled (better use upsynctex[state=start])

### --nodates

omit runtime dates in pdf file (optional value: a number (this 1970 offset time) or string "YYYY-MM-DD HH:MM")

## --nocompression

forcefully turns off compression in the backend

#### --trailerid

alternative trailer id (or constant one)

### --generate

generate file database etc. (as luatools does)

# --paranoid

do not descend to .. and ../..

## --version

report installed context version

## --global

assume given file present elsewhere

--nofile use dummy file as jobname

### **OPTIONS: EXPERT**

**--touch** update context version number (also provide --expert, optionally provide --basepath)

# --nostatistics

omit runtime statistics at the end of the run

## --profile

profile job (use: mtxrun --script profile --analyze)

## --timing

generate timing and statistics overview

## --keeptuc

keep previous tuc files (jobname-tuc-[run].tmp)

## --keeppdf

keep previous pdf files (jobname-pdf-keep.tmp)

## --keeplog

keep previous log files (jobname-log-[run].tmp)

--lmtx force lmtx mode (when available)

# --overloadmode=error|warning|0--6|255

enable csname overload checking

#### --extra=name

process extra (mtx-context-... in distribution)

### --extras

show extras

## --ownerpassword

encrypt the (pdf) file using this master password

# --userpassword

use an additional password for opening the document

### --permissions

list of: print, modify, extract, add, fillin, assemble, quality

# **OPTIONS: SPECIAL**

# --pdftex

process file with texexec using pdftex

- --xetex process file with texexec using xetex
- --mkii process file with texexec
- **--pipe** do not check for file and enter scroll mode (--dummyfile=whatever.tmp)

### --sandbox

process file in a limited environment

# --addbinarypath

prepend the (found) binarypath to runners
